

In the Claims:

This listing of claims will replace all prior versions, and listings, of claims in the Application.

1. (Currently amended) A method for configuring a data storage system, the method comprising the steps of:

presenting a user interface;

receiving information related to workload characteristics and performance characteristics through the user interface; and

presenting storage configuration information for the data storage system that is based on these characteristics through the user interface;

wherein the performance characteristics include read and write characteristics associated with data to be stored on the data storage system and the read and write characteristics include random read hit information.

2. (Previously presented) The method of claim 1, wherein the storage configuration information includes information related to an amount of storage space associated with a quantity of disk drives for the data storage system.

3. (Original) The method of claim 1, wherein the workload characteristics include IO operations per unit of time.

Applicant: William Zahavi.
U.S.S.N.: 09/965,431
Filing Date: September 27, 2001
EMC Docket No.: EMC-01-160

4. (Canceled)

5. (Cancelled)

6. (Currently amended) The method of claim [[5]] 1, wherein the read and write characteristics include random read misses information.

7. (Currently amended) The method of claim [[5]] 1, wherein the read and write characteristics include sequential reads information.

8. (Currently amended) The method of claim [[5]] 1, wherein the read and write characteristics include writes information.

9. (Previously presented) The method of claim 2, wherein the information related to an amount of storage space associated with a quantity of disk drives is based at least in part on information about physical partitions on each disk.

10. (Original) The method of claim 1, wherein the information about performance characteristics is based at least in part on a user provided performance comfort zone value.

11. (Original) The method of claim 10, wherein the information about performance characteristics is based at least in part on information about a data protection scheme used with the data storage system.

12. (Original) The method of claim 11, wherein the data protection scheme is a Raid scheme.

13. (Currently amended) A system for configuring a data storage system, the system comprising:

a computer having a memory and a display;

logic in memory, wherein the logic is configured for execution of the following steps:

presenting a user interface;

receiving information related to workload characteristics and performance characteristics through the user interface; and

presenting storage configuration information for the data storage system that is based on these characteristics through the user interface;

wherein the performance characteristics include read and write characteristics associated with data to be stored on the data storage system and the read and write characteristics include random read hits information.

14. (Previously presented) The system of claim 13, wherein the storage configuration information includes information related to an amount of storage space associated with a quantity of disk drives for the data storage system.

Applicant: William Zahavi.
U.S.S.N.: 09/965,431
Filing Date: September 27, 2001
EMC Docket No.: EMC-01-160

15. (Original) The system of claim 13, wherein the workload characteristics include IO operations per unit of time.

16. (Canceled)

17. (Cancelled)

18. (Currently amended) The system of claim ~~[[17]]~~ 13, wherein the read and write characteristics include random read misses information.

19. (Currently amended) The system of claim ~~[[17]]~~ 13, wherein the read and write characteristics include sequential reads information.

20. (Currently amended) The system of claim ~~[[17]]~~ 13, wherein the read and write characteristics include writes information.

21. (Previously presented) The system of claim 14, wherein the information related to an amount of storage space associated with a quantity of disk drives is based at least in part on information about physical partitions on each disk.

Applicant: William Zahavi.
U.S.S.N.: 09/965,431
Filing Date: September 27, 2001
EMC Docket No.: EMC-01-160

22. (Original) The system of claim 13, wherein the information about performance characteristics is based at least in part on a user provided performance comfort zone value.

23. (Original) The system of claim 22, wherein the information about performance characteristics is based at least in part on information about a data protection scheme used with the data storage system.

24. (Original) The system of claim 23, wherein the data protection scheme is a Raid scheme.

25. (Previously presented) A program product for configuring a data storage system, the program product including a computer readable tangible medium with logic configured for causing the following computer-executed steps to occur:

presenting a user interface;

receiving information related to workload characteristics and performance characteristics through the user interface; and

presenting storage configuration information for the data storage system that is based on these characteristics through the user interface;

wherein the performance characteristics include read and write characteristics associated with data to be stored on the data storage system; and

wherein the read and write characteristics include random read hits information.

Applicant: William Zahavi.
U.S.S.N.: 09/965,431
Filing Date: September 27, 2001
EMC Docket No.: EMC-01-160

26. (Original) A method for configuring a data storage system, the method comprising the steps of:

presenting a user interface;

receiving information related to workload characteristics and performance characteristics through the user interface;

presenting storage configuration information for the data storage system that is based on these characteristics through the user interface;

wherein the performance characteristics include read and write characteristics associated with data to be stored on the data storage system; and

wherein the read and write characteristics include random read hits information.

27. (Original) The method of claim 26, wherein the read and write characteristics include random read misses information.

28. (Original) The method of claim 26, wherein the read and write characteristics include sequential reads information.

29. (Original) The method of claim 26, wherein the read and write characteristics include writes information.

30. (Original) The method of claim 26, wherein the storage configuration information includes information related to an amount of storage space associated with a quantity of disk drives for the data storage system.

31. (Original) The method of claim 30, wherein the information related to an amount of storage space associated with a quantity of disk drives is based at least in part on information about physical partitions on each disk.

32. (Original) A system for configuring a data storage system, the system comprising:
a computer having a memory and a display;
logic in memory, wherein the logic is configured for execution of the following steps:
presenting a user interface;
receiving information related to workload characteristics and performance characteristics through the user interface; and
presenting storage configuration information for the data storage system that is based on these characteristics through the user interface;
wherein the performance characteristics include read and write characteristics associated with data to be stored on the data storage system; and
wherein the read and write characteristics include random read hits information.

33. (Original) The method of claim 32, wherein the read and write characteristics include random read misses information.

Applicant: William Zahavi.
U.S.S.N.: 09/965,431
Filing Date: September 27, 2001
EMC Docket No.: EMC-01-160

34. (Original) The method of claim 32, wherein the read and write characteristics include sequential reads information.

35. (Original) The method of claim 32, wherein the read and write characteristics include writes information.

36. (Original) The method of claim 32, wherein the storage configuration information includes information related to an amount of storage space associated with a quantity of disk drives for the data storage system.

37. (Original) The method of claim 36, wherein the information related to an amount of storage space associated with a quantity of disk drives is based at least in part on information about physical partitions on each disk.
